New! Check fixtures with sensor technology

The Next Generation Inspection Platform

» Modular inspection platform
» Scalable from manual to automated inspection
» Sensor technology & data integration
» Designed for repeatability and future expansion
» Suitable for high-mix, low-volume production environments

The GPI platform enables reliable inspection with shorter setup times and increased process control.

GeTech

Founded in 2003 in Westerbork The Netherlands, GeTech specialized in the design, manufacture and measurement of check fixtures (gauges), primarily for the automotive industry.
We are your partner in all matters relating to check fixtures; competent, reliable and highly innovative.

We deliver the complete carefree package!

GeTech

High quality fixture manufacturer for leading production companies

We design, develop and produce control benches that you can trust.

Design

Our development and construction team has many years of experience in the field of designing tools and fixtures, as well as solution experience for various process optimizations in the industry.

For years, we use CAD software Inventor and are therefore able to process all common data formats.

Our in-house developed assembly tool manages all customer-specific standards in one structured environment. Starting from the final product, we can design fixtures extremely fast, with over 80% of the design already aligned to manufacturability and CAM programming.

This results in:
- First-time-right designs
- Shorter lead times
- Fewer engineering iterations
- Reliable transfer from design to production
- Efficient maintenance and future modifications through full fixture traceability per unique fixture ID

Production

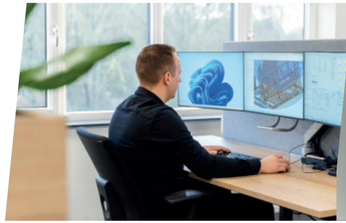
Our own production facilities enable us to be highly flexible.
The production of individual parts is carried out based on 3D CAD/CAM data.

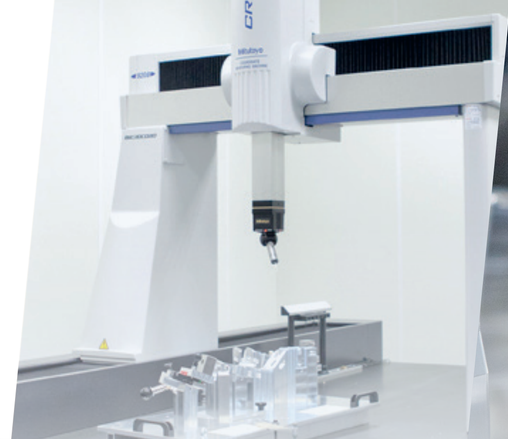
The data is read directly from the design departement.
This way of working has great benefits.

With advanced CNC machinery and equipment, we offer you the highest standards of today's production technology.

Performance range

- Check fixtures
- Gauges
- Bending gauges
- Check fixtures with sensor technology
- Welding fixtures
- Leak test
- 3D printing





Quality

GeTech is **ISO 9001 certified** and ensures that all customer-specific quality requirements are fully verified **before delivery**. With our Mitutoyo 3D measuring machine we are able to measure the fixtures directly after production.

A measurement reports is made according to the specifications of the customer.

Measuring machine:
Mitutoyo Crysta Apex 5 9208
Measuring range: 905 x 2005 x 805mm
